

It's necessary for college students to choose a field of study in which they could have enough chance in future to find career. Although job opportunities is a considerable factor but student's interest is the most important factor in their decision about studying field. I will support my position by a number of reasons in my essay.

It is true that some studying fields have less job opportunities in compare with another's but It should be considered that job opportunities are not just a function of studying fields. In fact the level of education is also of great importance in finding a job. Besides colleges with the studying field based on their interests are more likely to continue their education which leads to more chance in getting a suitable job.

In addition, finding a job is not all the thing. In these days as a cause of rapid growth in knowledge, Companies expect their employees to update their knowledge and there is no guarantee for employees to remain on their job without being the best for their companies. It is evident that a student which is interested in his studying field would be more eager to develop his skills in his job and as a result has a much more job security.

Next, although jobs related to some fields have more income but money is not all the thing. People usually spend half of their time in their career and having a job which is not attractive for you could be so boring and make you feel tired. In the other side, employees who are interested in their jobs are more energetic and happy in their life.

In conclusion, Students should base their choice of a field of study on their interest instead of careers available. By following their interest and studying hard they could be confident about their future career even in the fields with less job opportunities.
